

The Moon takes a period, which can vary, from 21 to 26 hours to go through its complete darkness. This variation because of the Moon's orbital anomalies. Once you know conjunction exactly, though conjunction is not part of Yahweh's calendar, you can expect visible sighting of the crescent between about 10.5 to 13 hours later. If that time is before the change of the day you may not have to skip to the next change of day.
